SIMPLE SENSE

The AI operator for your store.

Not another dashboard. Simple Sense reads your whole store and tells you the few moves to make this week — and why.

THE BIG IDEA, IN PLAIN WORDS

Imagine a wise shopkeeper who has run 500 stores — sitting right next to you, every Monday.

1

Stores make a giant pile of numbers every day.

Orders, visitors, ads, emails, returns. Way too much to read. Most owners open it, squint, and close it.

2

Simple Sense reads the whole pile for you.

It looks at years of your real data the way a sharp operator would — and finds the patterns hiding inside.

3

It tells you the few things to do — and why.

"Do these 3 things this week. Here's the reason, and here's roughly how much money it should add."

In one line: we turn a store's data into a short, ranked to-do list that makes the owner money — the judgment of a seasoned CEO, at software price.

THE PROBLEM

Merchants aren't missing data. They're drowning in it.

Every Monday morning

- Shopify, GA4, Meta and Google each tell a different story. Meta claims sales Shopify calls “direct.”
- Conversion sits at 1.2%... or 0.3% after a product went semi-viral — and no one knows why.
- Profit is a guess: the tools don't know ad spend, returns, or true landed cost.
- Two hours of CSV exports and pivot tables later — still no idea what to change this week.

10–15 hrs

per week reconciling numbers instead of running the business

0.3%

the conversion rate merchants report even after going viral

> *Am I the only one who opens Shopify Analytics every Monday and has no idea what to do with it?*
>
> — recurring theme across r/shopify & r/ecommerce

The hard part isn't seeing the data — it's connecting the dots and deciding what to change. Today every tool leaves that to the owner.

MARKET VALIDATION

Merchants are already asking for exactly this.

Representative voice from merchant communities (r/shopify, Talk Shop Discord, r/ecommerce), 2026.

“

Shopify dashboards are fine for quick snapshots, but it's mostly transactional data. I need the why behind the numbers and what to change on Monday.

— r/shopify

“

I'm drowning in data but still making terrible decisions. I spend hours reconciling Shopify vs GA vs Ads and still don't know what to do.

— Talk Shop Discord

“

Why do my numbers never match across platforms? I just want someone to tell me the three highest-ROI moves this week.

— r/ecommerce

The pattern: “I see the numbers but don't know what to change.” That sentence — repeated across communities — is the wedge.

WHY THE GAP IS EXPENSIVE

The "so what / now what" gap costs real money — every week.

10–15 hrs

Owner time lost weekly to data wrangling instead of growth

Missed

Geo plays: e.g. ~80% of buyers near your stores — never geo-fenced or pushed to local pickup

80 / 20

Top 20% of customers drive most revenue — but stay buried in spreadsheets, never over-served

Scaling?

Revenue grows, but owners can't tell if they're scaling profit or just spend

Agencies make it worse: $3–10k/month for beautiful monthly reports full of "opportunities" that still leave you to figure out the exact moves. You don't need more reports — you need a co-pilot who tells you what to do next.

Outcome we deliver: *from "I think traffic's okay but conversion feels off" → "Here are the 3 highest-ROI moves I'm making this week, and why."*

THE SOLUTION

Simple Sense is a virtual ex-CEO / ex-CMO for your store.

It ingests years of your real order and customer data, runs operator-level analysis, and delivers ranked, prescriptive moves — not another chart.

Sees what tools miss

Geographic concentration, Pareto customer economics, cohort & repeat-purchase drivers, cart-abandon signals, slow-moving inventory risk.

Thinks like an operator

Connects marketing spend, customer quality and profit — the way someone who has run and fixed hundreds of stores would in a strategy session.

Prescribes the next move

"Build this Klaviyo segment and launch this flow. Turn on these pickup rules. Test these ad angles." — with impact ranges and easy-export paths.

Positioning: *Everyone else sells a better rear-view mirror. Simple Sense is the co-pilot telling you where to turn next.*

HOW IT WORKS

Three steps. Connect once, get moves forever.

01

Ingest

Securely connect Shopify (Woo & BigCommerce next). Pulls 3–5+ years of order, customer, product & marketing data.

02

Analyze

Operator-grade AI engine runs cohort, geo, Pareto, retention & inventory analysis across the full history.

03

Prescribe

Ranked, prescriptive actions with expected impact and one-click / easy-export paths into Klaviyo, Shopify Flow & ad platforms.

It compounds: the more it watches your store, the sharper the moves — a monitoring layer that flags changes and surfaces the next play, every week.

WHY WE'RE DIFFERENT

A decision layer on top of the data layer.

Incumbents perfected visibility into the past. The unsolved, valuable job is telling the operator what to change.

Everyone else

The rear-view mirror

- Prettier charts & unified revenue dashboards
- Better attribution stitching across channels
- Shows what already happened
- Leaves the “now what” to you — or a $3–10k/mo agency

Simple Sense

The co-pilot

- ✓ Ranked, prescriptive moves — not charts to interpret
- ✓ Explains why, with the numbers behind each call
- ✓ Tells you what to change next, with impact ranges
- ✓ One-click / easy-export execution into your stack

WHY IT COMPOUNDS

The flywheel an incumbent won't build.

The incumbent's trap: Triple Whale has the install base — but not the outcome-prescription loop. Flipping their dashboard-and-agency model to build it would cannibalize roughly a third of revenue. **That gap compounds in our favor, every turn.**

PRODUCT IN ACTION

The non-obvious pattern — then the exact move.

Geographic concentration

Pattern: *"82% of your customers come from within 5 miles of your physical locations."*

What Simple Sense tells you to do:

- ✓ Geo-fence Meta & Google ads to a 5-mile radius
- ✓ Turn on aggressive local pickup / BOPIS via Shopify Flow
- ✓ Shift budget from national spray to local high-intent

Pareto customer economics

Pattern: *"Your top 20% of customers drive ~70% of revenue — and most were acquired one specific way."*

What Simple Sense tells you to do:

- ✓ Build the exact top-20% Klaviyo segment — auto-defined
- ✓ Launch a VIP flow: early access, private sales, higher touch
- ✓ Double down on the channel that produced them

WHY NOW

Three curves just crossed.

AI can reason like an operator

2024–2026 models can analyze structured commerce data and produce judgment-grade recommendations — not just summaries. The “prescription” layer is newly buildable.

The data is finally accessible

Mature Shopify, Klaviyo, Meta & Google APIs make it possible to unify a store's full history quickly and securely.

Willingness to pay is proven

A ~$25–29B e-commerce analytics market, and incumbents valued in the hundreds of millions, show merchants already pay for “make sense of my data.”

Category validation

Triple Whale (dashboards) raised ~$52–55M at a reported ~$300M valuation, with 5,000+ paying brands tracking $14B+ in sales — Shopify Ventures participated. **They proved the willingness to pay. We win the layer above: the decision.**

MARKET OPPORTUNITY

A $25B+ market, with a focused, ownable wedge.

TAM — Total market

~$25.7B (2025) ➞ ~$28.6B (2026)

Global e-commerce analytics software; ~14–17% CAGR to ~$60–97B by 2030–2035.

SAM — We can serve

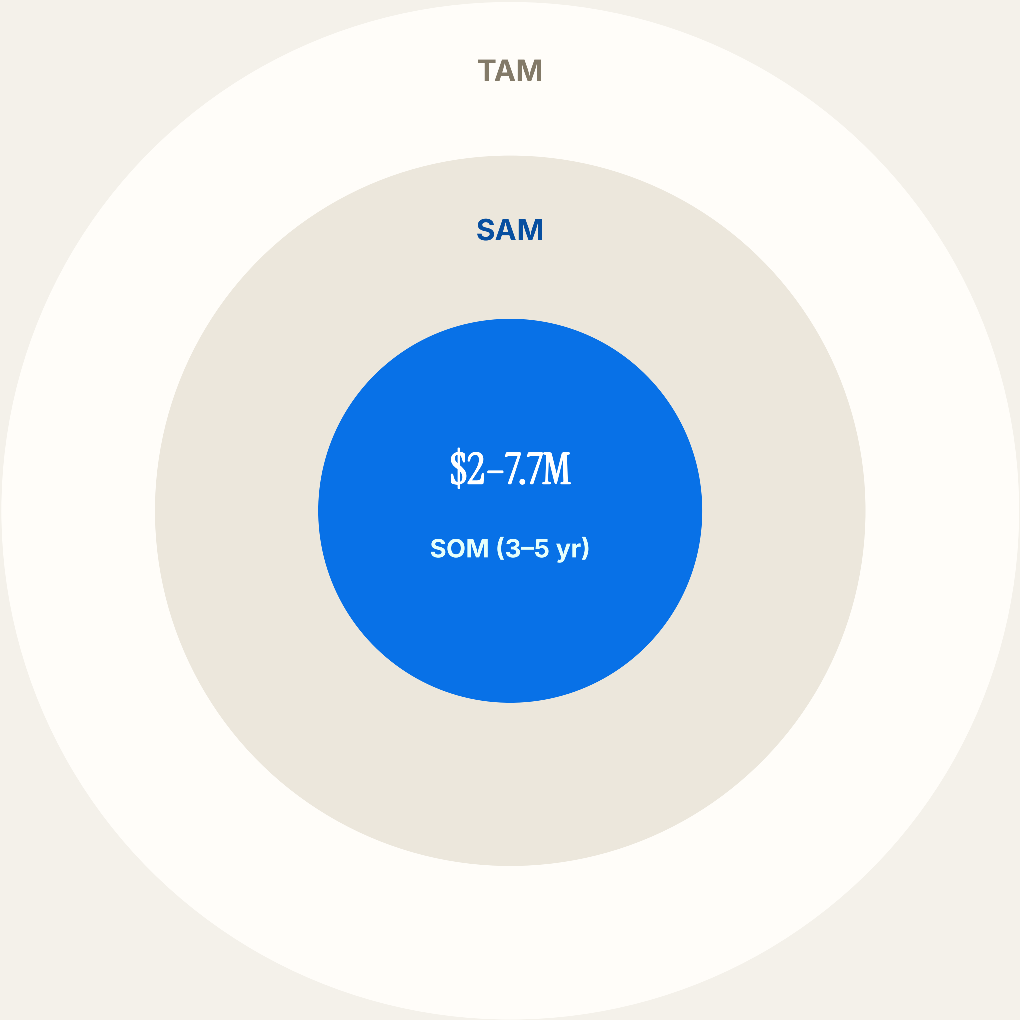
~$0.25–0.4B / yr

~250–400k merchants at $1–15M GMV on Shopify / Woo / BigCommerce × ~$1k blended ACV ($49–99/mo).

SOM — 3–5 yr obtainable

~$2–7.7M ARR (1–3% of SAM)

~2,500–8,000 stores over 3–5 years — consistent with the Base/Best scenarios.



SAM & SOM are bottoms-up estimates; see Appendix for derivation & sources. Penetration stays in low single digits even at the 5-year target.

WHO WE SERVE

The $1M–$15M operator who can't afford a CMO.

Ideal customer profile

Growth-stage DTC & omnichannel

- ✓ $1M–$15M annual revenue
- ✓ Shopify (Woo / BigCommerce next)
- ✓ Stack: GA4, Meta, Google, Klaviyo +
- ✓ Lean team — no in-house analyst or CMO
- ✓ 3–5+ years of order & customer history

Why they buy Simple Sense

They're time-poor

Owner-operators wearing five hats. They need answers, not another tool to learn.

They can't afford agencies

A fractional CMO or $3–10k/mo agency is out of reach — but the questions are the same.

They're flying blind on profit

They feel something's off in conversion or spend, but can't see the pattern or the fix.

They want to execute, not admire

Ranked moves with expected impact beat a 30-page report every single Monday.

BUSINESS MODEL

Simple SaaS subscription. Built for operators who can't afford a CMO.

Two accessible tiers — deliberately under Triple Whale (~$99–219+) and Polar (~$300–750+). A free audit is the front door.

Free Audit

$0

The front door

- ✓ One-time deep store audit
- ✓ Top prescriptive moves
- ✓ Shareable report

Basic

$49/mo

Solo & growing operators

- ✓ Geo + Pareto analysis
- ✓ Prescriptive recommendations
- ✓ Klaviyo segment export

Pro

POPULAR

$99/mo

Scaling $1–15M stores

- ✓ Everything in Basic
- ✓ Cohort / LTV + one-click actions
- ✓ Multi-store, API, priority support

Blended ARPU ~$68→$82/mo · 75–82% gross margin · LTV:CAC 6–8:1 · 4–6 month CAC payback · land with a free "Simple Sense Audit," expand to Pro

GO-TO-MARKET

Land free. Grow through community. Scale through partners.

Free audit, the wedge

"Get your Simple Sense audit free." The report is the hook; the subscription is the upgrade.

Shopify App Store

Native distribution where merchants already are. A strong listing + reviews compound discovery.

Community-led

Be genuinely useful where the pain is loud — r/shopify, Talk Shop Discord — plus weekly build-in-public on satya.me.

Agency + integration

Co-market with Klaviyo & Shopify Flow and agencies serving $1–15M stores. Paid only after 30–50 happy customers.

Motion

Land (free audit) → **Convert** (first prescriptions prove ROI) → **Expand** (monitoring + execution) → **Refer** (community + agency flywheel).

Three scenarios, net of churn — Base is the plan.

Conservative vs top-quartile Shopify-app benchmarks. Ranges, not false precision. At $49–$99 pricing, blended ARPU ~$68→$82/mo.

Scenario	Year 1 ARR	Year 2 ARR	Year 3 ARR
Worst	$30–42k	$125–160k	$400–550k
Base — the plan	**$60–90k**	**$300–430k**	**$1.1–1.5M**
Best	$150–220k	$800k–1.1M	$3.0–4.0M

Read it straight: Base is the planning number — steady App Store + community flywheel, churn improving to ~2.8%, break-even ~early Year 2 (Base reaches 1,300–1,600 customers). **Best is upside, not the expectation.**

Illustrative scenarios; assumptions in Appendix. Not a forecast or guarantee of future results.

Capital-efficient economics; break-even within reach early.

75–82%	6–8:1	4–6 mo	~$1.9–2.4k
gross margin	LTV : CAC	CAC payback	est. LTV / customer

Where early capital goes

Product & Engineering
Largest early line — a small full-stack team builds the engine + integrations.

Go-to-market
App Store launch, agency partnerships, content & first paid tests.

Data & AI infrastructure
Pipelines, LLM inference & SOC 2 path. Inference is the variable-cost swing factor — monitored closely.

Path to profitability

Year 1: build + land — a small team ships the engine and App Store launch; first paying customers via community.

Early Year 2:
break-even (Base case) — App Store + community keep CAC low; a lean cost base is covered by recurring revenue.

Year 2+:
compound — 75–82% margins on a growing recurring base fund Woo, BigCommerce & deeper automation.

COMPETITIVE LANDSCAPE

Everyone optimizes the rear-view. We own the decision.

Competitor	Core focus	Pricing	The gap vs Simple Sense
Triple Whale	Attribution, profit, AI agents (Moby)	~$99–219+/mo	Dashboard/attribution-heavy; AI is general agents, not specialized prescriptions
Polar Analytics	Data unification, AI insights, warehouse	~$300–750+/mo	Higher price, BI/warehouse-focused; reporting + insights, not prescriptions
Littledata	Server-side tracking / data layer	~$199+/mo + per-order	Narrower, tracking-first; complementary, not a prescription platform
Northbeam	Attribution, incrementality, MMM	Enterprise	Complex/expensive; geared to $40M+ brands; less accessible for $1–15M
Lifetimely / BeProfit / Saras	Profit tracking, P&L, cohorts	$50–few hundred	Dashboards / narrow metrics; lack operator-level prescriptions
Simple Sense	Prescriptive operator brain	**$49–99/mo**	**We ARE the decision layer — ranked moves + expected impact, at software price**

Honest read: *the market is strong at "what happened." Incumbents are adding AI "recommendations" too — our defense is depth of prescription, outcome accountability, and the underserved $1–15M operator, not feature parity. (See Risks.)*

RISKS & HOW WE DE-RISK

We name the risks — and the mitigation for each.

Incumbents add AI recommendations

Win on prescription depth + outcome accountability; serve the $1–15M operator incumbents drift away from.

SMB churn & volatility

Anchor value to demonstrated revenue lift; annual plans; embed in the weekly workflow.

AI accuracy / trust

Every move grounded in the merchant's own numbers, with a transparent "why"; human-reviewable; conservative claims.

Data privacy & security

SOC 2 roadmap, least-privilege access, clear DPA, US data residency for sensitive PII.

Platform dependency (Shopify)

Own the data + decision layer, not just an app; multi-platform roadmap (Woo, BigCommerce).

Early-stage execution risk

Advisory bench, fractional senior hires, tight milestone gates tied to capital.

ROADMAP & MILESTONES

From MVP to multi-platform, in four moves.

Now · Q3 2026

MVP & design partners

Shopify ingest + first prescription set (geo, Pareto, cohorts). Hand-in-hand with early stores.

+6 months

App Store launch

Free “Simple Sense Audit” lead magnet. First 150–250 paying customers. Agency pilot signed.

+12 months

Monitoring & execution

Change-alerts + one-click hooks into Klaviyo, Flow & ad platforms. ~1,000+ customers.

+18–24 months

Multi-platform & scale

WooCommerce + BigCommerce. Deeper automation. Raise seed / Series A on proven metrics.

TEAM & FOUNDER

Built by an operator who has actually run the stores.

SS

Satya Sivunigunta

Founder & CEO

25+ yrs digital commerce & retail leadership · building in public on satya.me

The operator résumé

- ✓ CEO of SelectBlinds — a ~$80–200M online window-treatment retailer (Hunter Douglas took a minority stake, 2023).
- ✓ Retail & omnichannel leadership at Microsoft, Nike, JCPenney, Conn's HomePlus, and Art Van.
- ✓ Deep operator experience across omnichannel, pricing, loyalty, supply chain, and retail transformation.

Why it matters: prescriptions only land if they carry real operator judgment. That credibility is the **wedge** — it lowers CAC through authentic community presence and earns trust for deep data access. The durable, compounding **moat is the outcome-data flywheel.**

THE ASK

Raising a pre-seed round to build the engine and prove ROI.

Target raise

$1.0M

pre-seed · ~18–24 mo runway

Instrument & valuation to be set with counsel.

Use of funds

45%	**Product & Engineering** Prescription engine, Shopify integration, the free Audit; small full-stack team
25%	**Go-to-market** App Store launch, agency partnerships, community, light paid tests
15%	**Data & AI infrastructure** Pipelines, LLM inference, monitoring / SOC 2 path
15%	**Operations & G&A** Legal / entity, GDPR · CCPA, finance, founder runway + first hire

Milestones this unlocks: live on the Shopify App Store · 150–250 paying customers · agency channel signed · ROI case studies · ~$0.7–1.0M ARR run-rate.

SIMPLE SENSE

Stop drowning in data.

Start executing high-confidence moves.

Simple Sense is the co-pilot every $1–15M store has been missing — operator judgment, at software price.

APPENDIX

Sources & key assumptions

Model assumptions (illustrative)

- Pricing: $49 Basic / $99 Pro per month; blended ARPU ~$68 → ~$82/mo (~$815 → ~$980/yr).
- Gross margin 75–82% (hosting + LLM inference + data + CS); inference is the variable-cost swing factor.
- Monthly churn ~4.0% (Y1) → 2.5–2.8% (Y2+) → ~25–30-month average lifespan; LTV ≈ $1,900–2,400.
- Blended CAC ~$250–350 early → $450–600 mature; LTV:CAC 6–8:1; payback 4–6 months.
- SAM: ~250–400k merchants at $1–15M GMV on Shopify / Woo / BigCommerce × ~$1k ACV ≈ $0.25–0.4B serviceable.
- Scenarios (net of churn): Base Y3 $1.1–1.5M (1,300–1,600 cust.); Best Y3 $3.0–4.0M; Worst Y3 $400–550k.
- Ask: $1.0M pre-seed (buffer $1.25–1.5M), post-money SAFE, ~$10M cap target — terms set with counsel.

Selected sources

- Market size: Coherent Market Insights (e-commerce analytics $25.72B in 2025, 17.7% CAGR); Business Research Insights ($25.01B 2025 → $28.64B 2026, 14.51% CAGR); Research & Markets ($29.275B 2025).
- Shopify scale: Demandsage (6.81M active stores, 2026); Storeleads (~74.5k Shopify Plus); Latori / Uptek (5.5–6.5M live stores; ~1.4% avg conversion).
- Category validation: TechCrunch / The SaaS News / IoT M2M Council ($25M Series B, 5,000+ brands, $14B+ tracked sales, Shopify Ventures); Tracxn / CB Insights / GetLatka (~$52–55M raised, ~$300M valuation, ~$21.6M revenue).
